10-06-2024
- New utilization class is added named "Security" to check the validity of the password, hashing the password and checking the credentials before letting a user log in
- Setup methods for retrieving messages, retrieving contacts, adding message history and messages, deleting message history and messages to work with the database.
- Changed MessageRoute accordingly.

11-06-2024
- API's for authentication to initiate a user session is set, when a user tries to log in.

12-06-2024
- Necessary DTO and DAO classes are created to set an API for comment retrieval belonging to a specific post.
- An API for comments is set to retrieve all the comments belonging to a post with a given id.
- The contact Messenger front-end can display contacts for a given user.

13-06-2024
- Image upload & retrieval API for Person entities is added
- API's for retrieving total likes for a post and checking if the user with given id likes the post.
- Drawing up designs for new main cards page

16-06-2024
- Login and Register pages are finished. Their design has been updated and their functionality works correctly. The login form sends POST requests to authenticate users, and displays responses received from the server if the credentials are incorrect. The sign up form sends POST requests to create users or sponsors, and displays responses from the server if input fields were not completed correctly.
- Navigation bar is updated. It expands from the left side of the screen when a button is pressed.

- Profile page gets the user data dynamically and features profile picture upload and retrieval.
- Edit profile pop up is converted into edit profile picture pop up and the editing functions are separated for the other profile details.
- Started implementation on new main cards page with new design

17-06-2024

- Attribute "description" is added for the BaseUser table in our database to be put in the profile page. Necessary adjustments are made to progress without any error.
- Profile page allows user to change the attributes, and these changes are reflected on the database
- Image upload & retrieval API for Sponsor entities is added.
- Profile page offers a tailored view based on the user type, which can be either Person or Sponsor.
- Loading screen is added for profile page to cover the page until the data and the image is retrieved from the server.
- New design for main cards page complete
- Design of the card details page is completed.
- A page containing the form to create cards is created and the design of it is completed.
- The home page design is updated, the top part contains an image to welcome the users, the middle part contains 3 buttons which change the information and images displayed there, and the bottom part contains a 'Contact Us' form.
- The functionality to fetch cards and display them is updated such that the cards are sorted by the time of creation, most recent cards appear on top.

18-06-2024

- The functionality of clicking a card is complete, when users select a card from the 'cards.html' page, a GET request to retrieve the information for that card is sent, 'card-details.html' page is filled with this data and users are redirected to this page.
- The piano animation is updated, it appears from the bottom of the screen, and a different sound is played when each piano button is clicked.
- The 'repeat password' field from the 'register' page is updated such that a check is made that this field and the 'password' field contain the same values when the request for sign up is sent.
- The navigation bar is added to all pages.
- Added functionality for sending messages to the front-end of messenger.

- Setup login session utilization for messenger so now it uses login details rather than predefined ids.
- Switched navigation bar for messenger, changed design of messages to accommodate delete functionality, added modal for invites, configured scrollbar to start at the bottom of the chat.

19-06-2024
- The navigation bar is updated when users log in and log out. When a user is logged in, the 'messenger' and 'profile' buttons appear.
- The 'edit post' and 'delete post' buttons are added, these are visible only for the user who created the post.
- Liking functionality is added on the card detailed page. "Person" users are able to like posts, whereas "Sponsor" and unauthenticated ones are only able to see the current like count of the post.
- Users can now fill out the form "Contact Us" to send their feedback. For now, these feedback are sent to our database instead of being sent to our teams' email.

20-06-2024
- Pagination is added to the GET method for "posts".
- Loading screen is added for the cards overview page.
- Detailed card page is modified to dynamically fetch author data and post data.
